

MAINA NORBERT OSIEMO

Contact: +254 799 535642 | mainanorbert@gmail.com | Address: 40-500, Nyanza 30 |
LinkedIn: <https://www.linkedin.com/in/norbert-osiemo-0256a4144/>

Professional Summary Versatile Software Engineer and AI Engineer with strong experience in full-stack development. Proficient in Python, Django, Flask, React, and C, with solid DevOps skills (AWS, Vercel, GCP) and database management. Successfully built secure web applications, automated workflows, and mentored developers at ALX Africa. At Turing in California (remote), contributed to LLM fine-tuning and agentic AI research using RLHF and ReAct. Holds a BSc in Mathematics and Computer Science from Machakos University and a Software Engineering certification from Holberton School. Passionate about generative AI, agent design, and scalable AI systems.

Work History

Software Engineer (LLM C Developer), Turing – California, USA (Remote), August 2024 – Present Focused on improving model behavior in coding tasks using Python, SQL, and PostgreSQL environments. Enhanced LLMs' contextual understanding, problem-solving, and decision-making abilities toward AGI objectives. Fine-tuned LLMs using Supervised Fine-Tuning (SFT) and Reinforcement Learning with Human Feedback (RLHF). Contributed to mentorship and AI research initiatives, fostering knowledge-sharing and innovation across engineering teams.

As **RLHF Agentic Reviewer – Apple Project**, reviewed and evaluated agentic conversation designs involving tool-augmented assistants simulating real-world tasks. Ensured high-quality notebook submissions by validating reasoning flow, tool integration, and output integrity. Simulated user-assistant interactions with corrective tool use.

As **Sub-Lead – Agentic AI**, led and mentored LLM trainers on agentic tasks involving tool use, API calls, and contextual reasoning. Reviewed training data, oversaw quality control, and collaborated on training protocols for building reasoning-capable AI systems.

Software Engineer Tutor, ALX Africa, August 2024 – November 2024 Provided hands-on support in debugging and improving projects built with Flask, Django, and React.js. Mentored students in software development, focusing on MVPs, GitHub collaboration, and delivering scalable applications with high code quality.

Web Developer (Freelance), January 2022 – December 2022 Developed secure authentication systems, Python-based solutions, and responsive UIs with Tailwind CSS. Delivered full-stack applications using Django, React.js, Laravel, and Node.js while integrating MySQL/PostgreSQL databases and optimizing performance.

Statistician, Kenya National Bureau of Statistics (KNBS), Kenya, January 2021 – April 2021 Participated in data collection, surveys, data cleaning, and analysis using Excel and SPSS. Collaborated with teams to improve data-driven solutions and software quality.

Education

Software Engineering, Holberton School (ALX), February 2023 – April 2024 Covered C Programming, Linux, Python, Django, DevOps (Nginx, Apache, load balancing, monitoring), REST/Fast APIs, and team collaboration tools.

Bachelor of Science in Mathematics and Computer Science, Machakos University, September 2017 – April 2022 Graduated with Second Class Honors.

Additional training: **Andela – LLM Engineering (FDE)** – RAG, Agentic Frameworks (Crew AI, Autogen, Open AI SDK), and deployment on GCP (Terraform), AWS, Vercel.

Projects

- **Welfare Management System (January 2024 – March 2024):** Developed a web platform to eliminate manual record-keeping inefficiencies in welfare groups. It automates financial tracking, enhances transparency, accountability, and easy access to welfare information using Django, Next.js, and Tailwind CSS.
- **Kibhoret:** Built a raw material management system for an oil production company with role-based dashboards. Users monitor and verify trucks from loading to offloading points in real-time. Developed with Django, Next.js, and TypeScript.
- **Meridian Electronics Customer Support Chatbot:** MCP-powered chatbot allowing users to interact via chat interface for product availability, authentication, order history, and order placement. Improves customer experience with fast, accurate responses.
- **Customer Support SaaS Platform:** AI-powered support platform for multi-tenant businesses. Enables companies to create custom agents with their own knowledge base to handle customer queries via chat, email, or WhatsApp interfaces.
- **LinkedIn MaNAGAR:** AI-powered LinkedIn post assistant for software engineers. Automatically detects recent project changes, crafts tailored professional posts, and helps maintain consistent personal branding on LinkedIn.

Skills Python, Django, Flask, React.js, Next.js, TypeScript, C, Laravel, Node.js, Tailwind CSS, MySQL, PostgreSQL, MongoDB, DevOps (AWS, GCP, Vercel), RAG, Agentic AI Frameworks, Generative AI tools, Technical Writing.

Other Competencies Strong communication, leadership, problem-solving, teamwork, data analysis (Excel, SPSS, Python, Tableau), and graphics design skills.

Trainings & Certifications

- Fundamentals of Artificial Intelligence (ALX Africa)
- Certification in Fundamentals of AI Agents
- Ajira Digital Training
- Google Digital Skills
- Peer Counseling
